ML Assignment-2

- Q3) ID3 determines the information gain for each candidate candidate attribute and then selects as with highest info gain.

$$\begin{aligned} \text{Gain}(S, \text{Humidity}) &= 0.940 - (7/14) 0.985 - (7/14) 0.592 \\ &= 1.57 \end{aligned}$$

$$= 0.048$$

The information gain values for all attributes are

$$\text{Gain}(S, \text{outlook}) = 0.246$$

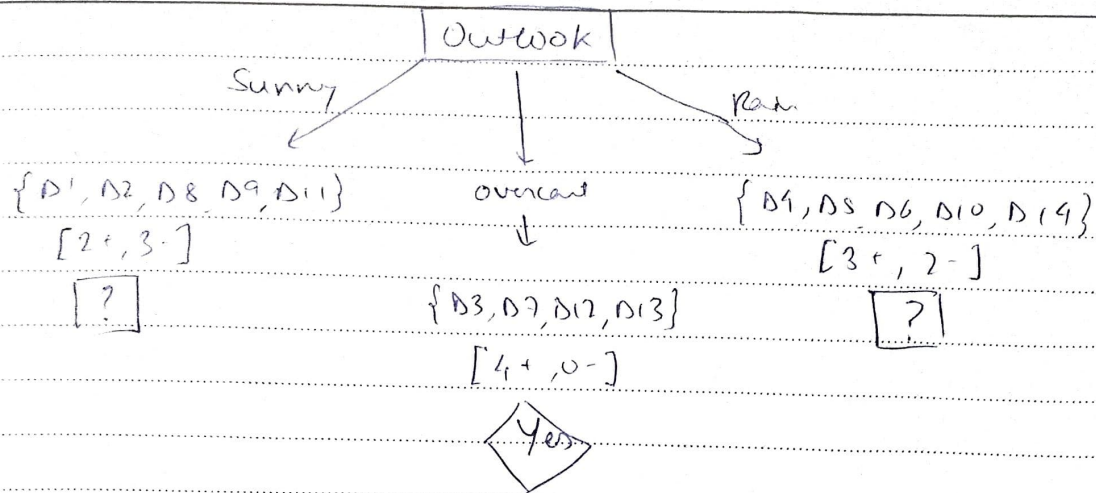

$$\text{Gain}(S, \text{Humidity}) = 0.157$$

$$\text{Gain}(S, \text{wind}) = 0.048$$

$$\text{Gain}(S, \text{temp}) = 0.029$$

The outlook provides the best production of the target attribute, play tennis over training example

∴ Outlook is selected as the decision attribute for the root node and branches are created below for root for each of its possible values i.e., Sunny, overcast, and rain

Sunny = {D1, D2, D8, D9, D11}

8

$$\text{Gain}(\text{Sunny}, \text{Humidity}) = 0.970 - (3/5)0.0 - (2/5)0.0 = 0.970$$

$$\text{Gain}(\text{Rain}, \text{temp}) = 0.970 - (2/5)0.0 - (2/5)1.0 - (1/5)0.0 = 0.570$$

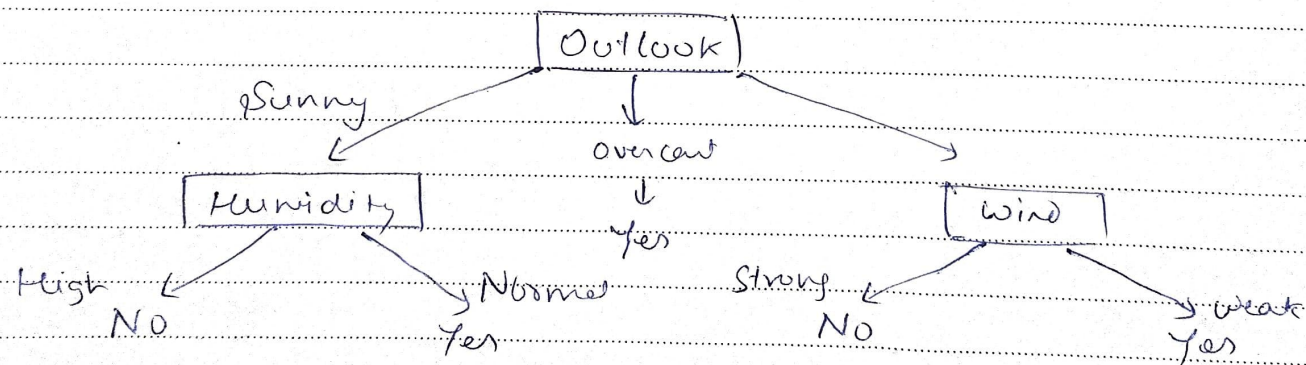

$$\text{Gain}(\text{Sunny}, \text{wind}) = 0.970 - (2/5)1.0 - (3/5)0.918 = 0.014$$

Rain = {D5, D6, D8, D10, D14}

$$\text{Gain}(\text{Rain}, \text{Humidity}) = 0.970 - (2/5)1.0 - (3/5)0.918 = 0.019$$

$$\text{Gain}(\text{Rain}, \text{temp}) = 0.970 - (0/5)0.0 - (3/5)0.918 - (2/5)1.0 = 0.019$$

$$\text{Gain}(\text{Rain}, \text{wind}) = 0.970 - (3/5)0.0 - (2/5)0.0 = 0.910$$

The complete decision tree
